

## Creating and Saving a Movie using QuickTime Player (for a Voki)

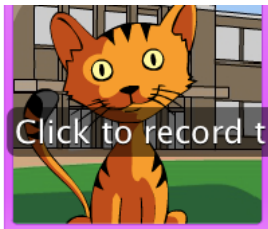

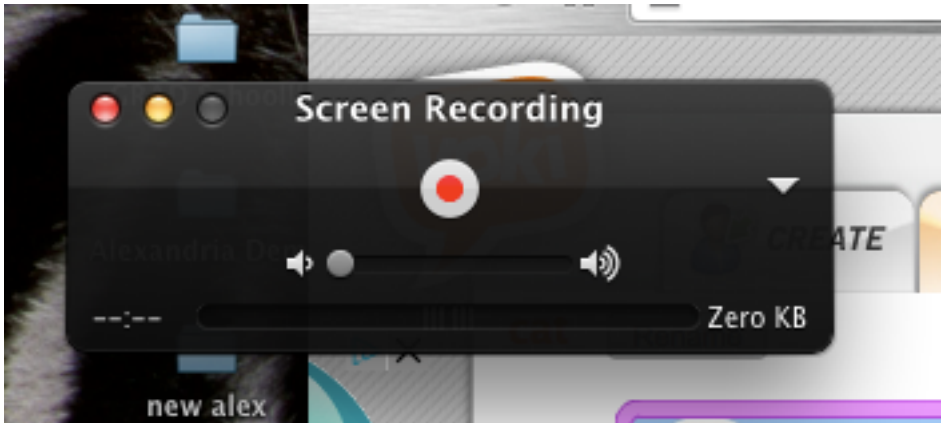

1. Go to the Voki website and open the Voki you would like to record.
2. Open QuickTime Player.

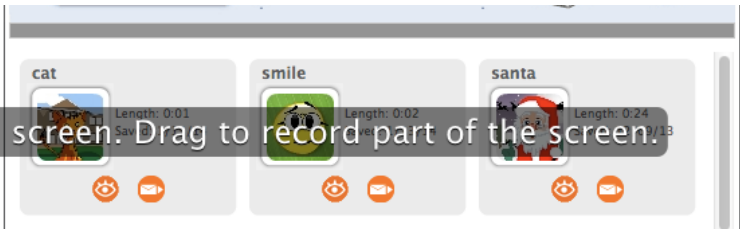

3. Under the QuickTime Player menu, select File-New Screen Recording

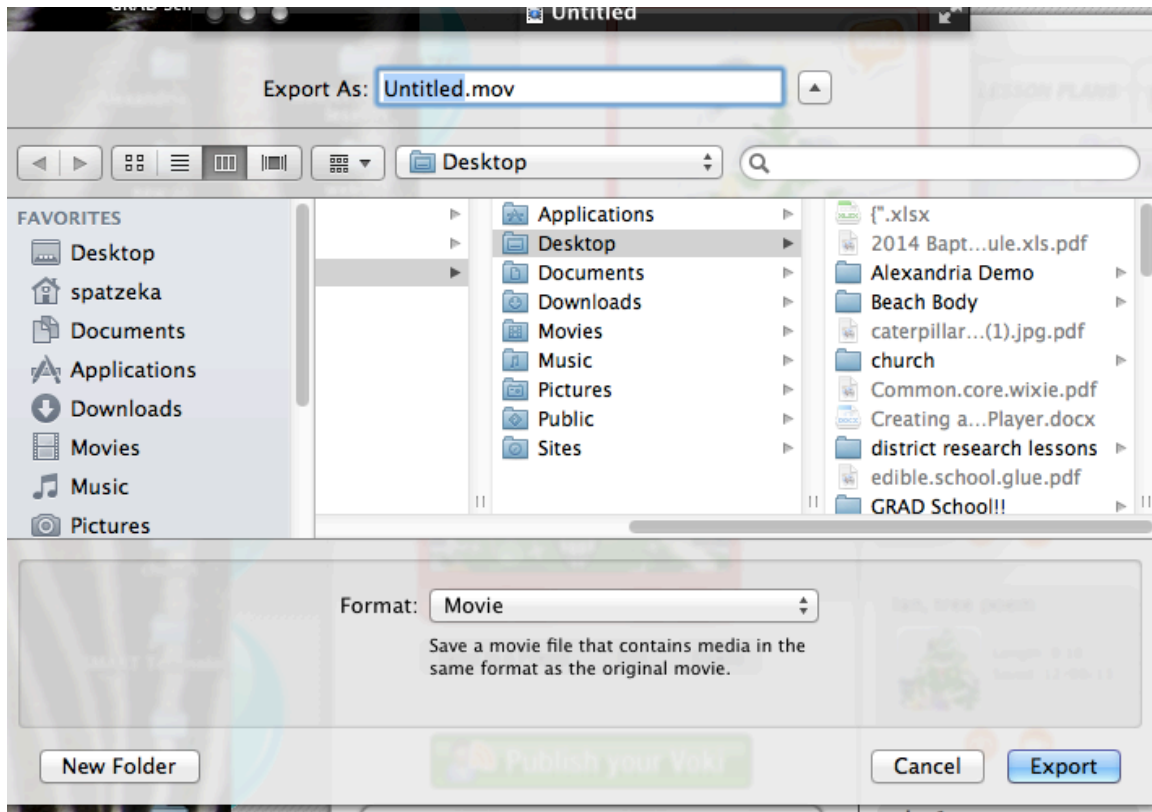

4. Click the red record button. You will be prompted to do full screen or partial. (You want partial.) Click, hold and drag your Voki. (QuickTime will enlarge the shape. Have your "extra" space on the left so that it can be cut off in your PowerPoint)

Click to record the full screen. Drag to record part of the screen.

5. Click on “Start Recording” then press the play button on your voki.
6. When Voki recording has ended, press the stop button.
7. To save, click the Export under the File menu. Save to desktop.

NOTE: After PowerPoint is complete or at least the Voki portion, remove the movies from your desktop as they take up a lot of space.
